NEW HOUSES SOLD AND FOR SALE

This report provides statistics for new privately owned one-family houses sold and for sale. The U.S. Census Bureau and the U.S. Department of Housing and Urban Development jointly release this report.

Sales of new one-family houses in July 2000 were at a seasonally adjusted annual rate of 944,000 compared with the revised June rate of 823,000. The July 1999 rate was 936,000.

The median sales price of new houses sold in July 2000 was \$166,100; the mean sales price was \$196,700. Changes in median and average sales prices reflect changing proportions of houses with different locations, sizes, etc., as well as changes in the prices of houses with identical characteristics. For a measure of the change in the sales price of new houses sold which are the same with respect to important characteristics, refer to the price indexes found in Tables 7a and 8 in this report. Table 7 presents the Fisher Ideal chain-type annual-weighted index that does not hold these important characteristics constant. For a description of these indexes, see the appendix in the March 1997 issue of this report.

The seasonally adjusted estimate of new houses for sale at the end of July 299,000. This represents a supply of 3.8 months at the current sales rate.

Through July of this year, there were 560,000 houses sold, compared with 568,000 sold during the same period last year. This is a decrease of 1 percent.

EXPLANATORY NOTES

The statistics in this report are estimated from sample surveys and are subject to sampling variability, as well as errors of response and nonreporting. Estimated average relative standard errors for preliminary statistics for houses sold and for sale are shown in the tables. For monthly estimates, they are based upon the latest 6-month period ending June or December (January-June or July-December). Quarterly estimates are based upon the more recent of the first 2 quarters or last 2 quarters of the most current year; annual estimates on the last 2 years.

For month-to-month comparisons of total houses sold, the range of the 90-percent confidence interval is ± 9 percentage points from the estimated change. For year-to-date comparisons, the range is ± 3 percentage points. When the range of the confidence interval contains zero, it is uncertain whether there was an increase or decrease; that is, the change is not statistically significant.

In interpreting changes in the statistics in this report, note that month-to-month changes in seasonally adjusted statistics often show movements which may be irregular. It takes 4 months to establish an underlying trend for new houses sold. Preliminary estimates of new houses sold are subject to revision due to the survey methodology and definitions used. The survey is based primarily on a sample of houses selected from building permits. Since a "sale" is defined as a deposit being accepted or a sales contract being signed, the sale can occur prior to the issuance of a building permit. An estimate of these prior sales is included in the sales figure. On average, the preliminary seasonally adjusted estimate of total sales is revised about ± 3 percent. This does not include the revisions made when new seasonal factors are computed.

HUD-coded manufactured homes are not included in these statistics. Data for these manufactured homes can be found on the Internet at:

www.census.gov/const/www/index.html

For further information on these data, contact the Construction Expenditures Branch, Manufacturing and Construction Division. Telephone: 301-457-1605.

Historical statistics on new one-family houses sold and for sale from 1963 to date are available from the Residential Construction Branch, Manufacturing and Construction Division, U.S. Census Bureau, Washington, DC 20233-6900. Telephone: 301-457-1321.

^pPreliminary. ^rRevised.¹Houses for which sales price was not reported have been distributed proportionally to those for which sales price was reported.²Total equals 100 percent.

Note: The sales price includes the land.

Table 5. Current Seasonal Factors

Month and year	New houses sold					New houses for sale	Months' supply at current sales rate	Median months from start to—	
	United States implicit factor	Northeast	Midwest	South	West			Sale	End of month
2000: April ^r	112.8	113.7	119.3	109.6	114.1	98.9	87.0	102.4	106.8
May ^r	110.1	109.4	115.5	108.9	108.8	99.5	88.4	91.2	98.9
June ^r	107.2	106.8	112.5	106.6	104.8	100.5	90.5	90.4	93.3
July ^P	104.6	97.6	108.3	105.3	102.5	99.2	95.3	94.5	92.5

^PPreliminary. ^rRevised.

Note: These are the seasonal factors used to adjust the most current preliminary and revised estimates. The factors are produced by running each series through the X-12 ARIMA version seasonal adjustment program. For new houses sold, only the four regional series are run through this X-12 program. The resulting seasonally adjusted estimates are then added to produce an estimate for the United States. The implicit factor is the result of dividing the unadjusted estimate by the seasonally adjusted estimate. It provides an indication of the overall seasonality for the particular month.

Table 6. Median Number of Months on Sales Market

[Houses not started are excluded. Medians computed from unrounded figures]

Period	Houses sold, measured from month of start		Houses for sale		Period	Houses sold, measured from month of start		Houses for sale			
			Measured from month of start					Measured from month of start	Measured from month of completion (not seasonally adjusted)		
	Not seasonally adjusted	Seasonally adjusted	Not seasonally adjusted	Seasonally adjusted		Not seasonally adjusted	Seasonally adjusted	Not seasonally adjusted	Seasonally adjusted
